

1. The first step is to identify the problem. In this case, the problem is that the system is not working properly.

2. The next step is to gather information about the problem. This includes checking the logs, looking at the error messages, and talking to the users who are reporting the problem.

3. Once you have gathered information, you need to analyze the problem. This involves looking at the data and trying to figure out what is causing the problem.

4. After you have analyzed the problem, you need to develop a solution. This could involve changing the code, updating the hardware, or changing the configuration.

5. Finally, you need to test the solution. This involves running the system and making sure that the problem has been fixed.

Docket No. F-9067

Ser. No. 10/581,695

In accordance with the Notice in 1027 OG 115, it is respectfully requested that one-half of the filing fee, that is, \$630.00, be refunded by crediting Patent Office Deposit Account No. 10-1250. A duplicate copy of the Letter is enclosed.

Respectfully submitted,

JORDAN AND HAMBURG LLP
